

Tesla Energy Plan

Switch to the Power of Clean Energy

Take control of your energy and save money on your bills with the Tesla Energy Plan. You'll receive the lowest flat electricity rate in the UK and pay no standing charge.*

Lower Energy Bills

Instantly save with the most competitive import and export rates 24/7 and no standing charges.

Power Cut Protection

Powerwall works with solar to power your home, even during a power cut, thanks to a back-up reserve of at least 20%.

No Fossil Fuels

Powerwall easily integrates with solar to power your home and electric vehicle, with any additional energy needed coming from renewable sources via the grid.

Monitor Your Energy

Seamlessly monitor your Powerwall, solar and home energy use anytime, anywhere with the Tesla app.

Save on Your Commute

Sign up now and get 8,000 free miles, that's £200 home charging credit, when buying a new Powerwall.

*Our plan offers a flat import rate of £0.08/kWh- the lowest single rate tariff available in the market (As of July 2020) and a flat export rate of £0.08/kWh for any electricity you export - 30% more than the best fixed S.E.G. tariff on the market (As of July 2020). Tesla's authorised retail partner, Octopus Energy, administers the plan.

Join Tesla's UK Energy Community

On the Tesla Energy Plan, you're part of Tesla's UK Energy Community. Your Powerwall will be connected to a growing network of homes across the UK, designed to help support the energy needs and stability of the electricity grid - all whilst providing you with ongoing savings through the most competitive rates on the market.

Tesla Energy Plan is an energy tariff specifically designed for Tesla vehicle owners who have solar panels and Powerwall installed in their home.

How It Works

Sunlight hits the solar photovoltaic (PV) panels and powers the home.

Any excess energy not needed by your home is stored in Powerwall or sent to the grid.

When there is no sun, the home is powered by stored solar energy in Powerwall or 100% clean energy imported from the grid.

As part of the Tesla Energy Plan, Tesla will optimise your Powerwall to manage how and when solar energy is used by your home, stored in Powerwall or exported to the grid. This helps reduce the wholesale market cost of the electricity you consume, giving you the best rates available, as well as supporting the grid during peak periods.

How to Join Tesla Energy Plan

To join the Tesla Energy Plan you need to have:

- A Tesla vehicle
- Electric Vehicle Charger installed at your home or will have one installed
- Solar panels and Powerwall (or a home suitable for this)
- Residential electricity supply

How to Register

1. Schedule the Installation

Your Tesla Powerwall Certified Installer will schedule your system installation as quickly as possible. As soon as your installation is complete, you're ready to switch to the Tesla Energy Plan.

2. Sign Up

When your Powerwall is installed you will be able to sign up to the Tesla Energy Plan via Tesla's authorised retailer Octopus Energy. Head straight to the [Octopus Energy](https://octopus.energy) website to sign up.

3. Activate Your Plan

Once your switch from your previous retailer to Octopus Energy is completed, activate the Tesla Energy Plan for you. Bear in mind that to activate the Tesla Energy Plan, you'll need to have a smart meter, if you don't already have one, your upgrade will be managed by Octopus Energy during the transfer at no cost.
