

Time to go self-sufficient? *Here to help with solar PV and battery storage*

David Stevenson, Mole Energy

Here to help!

We hope this finds you and your family safe and well.

Last month we wrote that we were preparing for Government measures, aimed at keeping us all safe. At the time of writing, (just a few days after the Prime Minister's address to the nation) things have moved on significantly, so Mole Energy continues to evolve, in order to provide customers with the best service we can.

Thanks to modern technology we have adapted and continue to operate.

We will do whatever we can to help, so please feel free to contact us on **01803 732946**. Our team are here to support you, as much as practically possible.

On behalf of us all at Mole Energy, stay safe and well.

- Dave Stevenson and Tim Hughes

Changing times; *time to change?*

Life is almost unrecognisable from a few months ago. At times, the pace of change can feel overwhelming. Maybe this is the moment to step back, reflect and plan to make changes that may help our lives become easier in the future.

Reconnect with community

One notable factor emerging is the renewal of our connection with each other. This was never clearer than when the nation came together to thank and applaud the NHS and front line care workers.

What has heartened me is the kindness, resilience and resourcefulness of people in general. At the time of writing, nearly half a million volunteers have signed up to help the NHS care for vulnerable people; firefighters have agreed to drive ambulances and deliver supplies; Formula 1 teams are utilising their engineering expertise to produce 20,000 ventilators - racing against time, instead of each other.

And our farmers, the backbone of our country and too often our unsung heroes, are doing everything they can to ensure our vital food chains and supply routes are maintained, both now and in the months ahead.

What can we do to help you?

As a businessman and family man, I understand how vital it is to keep going, especially during these uncertain times. And one of the ways we can help is to offer advice and guidance to enable you to plan ahead; especially if you are thinking of becoming more self-sufficient, or are looking at alternative ways to reduce outgoings; particularly energy bills.

Adding a battery to your solar PV installation will enable you to store power and help meet those energy needs in the summer; manage energy consumption in the winter and be self-reliant in the event of a power outage.

Through the use of technology, we can discuss your needs and create remote, bespoke, quotations for both solar PV and battery installation. And if you decide to go ahead, we will honour any remote quote, (which would normally also require an onsite survey).

Our specialist team of engineers at Mole Energy are here to support you and can also offer advice and guidance relating to the maintenance and optimisation of your current solar PV and battery systems, whether they were installed by us or not.

Great things are small things brought together.

If nothing else, the events of recent weeks and months have made clear how interconnected our world is and how dependent we are on each other. By embracing community and buying locally, we can build relationships, protect local businesses and weather the storms together.

Self-power your home with battery storage

A TESLA POWERWALL 2.0 BATTERY UNIT FROM £7,395 INSTALLED (EXC.VAT)

Considering going self-sufficient with solar PV and battery storage? We can offer remote, bespoke quotes and advice now. Call us on **01803 732946** or email **info@moleenergy.com**
