

Start the New Year happy by saving hundreds!

Dave Stevenson, Mole Energy

Start the New Year happy with Solar PV, a Tesla Battery and a home energy plan that could save you hundreds!

Those of you with home solar know the benefits (and will probably tell anyone who will listen).

Solar provides a sense of freedom as you go about your daily lives, with the peace of mind knowing your solar panels are providing enough free, green energy to significantly reduce your energy bills and your carbon footprint too.

If you've taken the next step and added a Tesla Powerwall battery to your panels, you'll also be enjoying the extra luxury of being self-sufficient, living off grid, unaffected by power cuts and able to squeeze every last drop of solar energy from your system.

Well, now there's even more to be happy about. If you've got panels and a Tesla battery, there's a new home energy plan that will help you **save even more money. All you have to do is switch!**

Octopus-powered

Tesla has partnered with UK renewable energy supplier, Octopus, to launch a joint energy plan that offers some of the lowest import and export energy prices on the market. This is exclusively for homeowners with both solar panels and a Tesla Powerwall battery.

It's a move that could save homeowners hundreds more pounds every year and could be the deciding factor for those of us thinking about adding a battery to our solar panels in 2021.

In the last year, over 50% of our home solar customers chose to add a battery system to their panels.

The Tesla Powerwall battery system has a few more advantages up its sleeve. It can keep your home powered in a power cut and it's monitored and controlled by a nifty smartphone app, so you can keep an eye on your energy usage when you're home or away. It also looks great and can be installed inside or out.

The new Tesla-Octopus Energy Plan is another tick in the box – offering homeowners with solar panels and a Powerwall access to some of the best electricity rates on the market. Sold!

For planet and pocket - how the Tesla-Octopus plan works:

The plan is exclusively available to homeowners with both solar panels and a Tesla Powerwall battery system.

There's no standing charge on your bill and the flat rate import tariff is the lowest on the market at the time of writing:

- 24/7 import rate of £0.11/kWh (for homeowners with panels and a Powerwall)
- 24/7 import rate of £0.08/kWh (for homeowners with panels, a Powerwall and a Tesla vehicle).

You'll also benefit from the highest flat export tariff (Smart Export Guarantee) rate, at the time of writing. This is paid to you for any excess energy generated, that you export back to the Grid:

- 24/7 export rate of £0.11/kWh (for homeowners with panels and a Powerwall)
- 24/7 export rate of £0.08/kWh (for homeowners with panels, a Powerwall and a Tesla vehicle).

If you've already got solar panels and a Powerwall battery, you can switch to the new energy plan immediately by switching your home energy plan. All you'll need is a home smart meter and if you don't have one, Octopus can install one for you.

If you've been toying with the idea of home solar or adding a battery to drive more value from your panels, our team is here to help you understand your options and to guide you from consultation to installation and beyond.

Saving money; saving the planet. Two good resolutions for 2021.

From all of us here at Mole Energy, Happy New Year!
