

# Solar - so simple

Dave Stevenson, Mole Energy

## Solar - the ultimate home improvement

Over the past year we've spent more time in our homes than ever before, and with travel restricted many of us have embarked on home improvements rather than holidays abroad.

According to a recent article in the Guardian, more time at home could see energy bills rise by 18% - so the timing couldn't be better to go solar. It's the ultimate in home improvements; reducing energy bills, adding value to your property and helping the planet too. And it's more affordable now, than it's ever been.

## Solar investment for planet and pocket

2021 is the perfect time to invest in home solar; something our customers, Sonia and Steve, decided to do.

Back in December, Mole Energy installed a 4kW home solar array, which **will save them between £450 and £500** on their bills each year and up to 2.3 tonnes of CO<sub>2</sub>, annually.

## As easy as one, two, free (energy!)

Adding home solar like Sonia and Steve couldn't be easier:

1. Contact us and speak to one of our surveyors, who'll discuss whether solar is right for you. We'll then design a bespoke quote, there and then, and if you're happy; we'll arrange a home visit to carry out your survey
2. Our team will handle all of your installation paperwork, including Building Control and District Network Operator requirements
3. Our specialist engineers will then install your new system, on a pre-arranged date, taking care to leave things as they find them. They'll also provide a full handover, so you'll know how your new panels work.

**With 4kW solar systems starting from as little as £4,995\* installed, it could be the best investment you make this year.**

### Solar investment for planet and pocket

"We wanted to make the investment; not only for ourselves and our home, but for future generations to come. Our neighbours have panels and told us that they'd dramatically reduced their bills. We decided to make the change, but weren't sure who to go with. Then we were recommended Mole Energy.

We spoke to Richard, who then visited us to survey our home. Richard answered all of our questions and impressed us with his expertise. He made us feel confident that we were making the right decision. And because Mole Energy is part of Mole Valley Farmers, we felt reassured that we were dealing with a well-established company; and that helped us feel comfortable in going ahead with our decision.

Mole Energy delivered a first-class professional service from start to finish. They completed the installation in four hours and their team were polite and respectful. Our solar panels look really smart and Steve is constantly checking his App to see how much energy they're generating.

We would thoroughly recommend Mole Energy without hesitation".
