

**AWARD
WINNING
SOLAR
INSTALLATIONS**

Designing a project which includes Solar PV and Battery Storage?

Contacting us early could save your client time and money.

“Having worked with **Mole Energy** on a previous build, I knew to get in touch right at the start of the build project to ensure a fully integrated solution.

They worked well with the builder and **delivered and installed on-time.**

If you are considering solar PV, then **I would recommend Mole Energy** as your first port of call.”

Crispin Waterhouse - Client

Mole Energy - Solar Experts

Specialist project management from start to finish:

1. **Our specialist surveyors will discuss** your client's requirements and provide projected returns, using solar-specific financial-modelling software.
2. **We'll liaise with your client's District Network Operator (DNO)**, to confirm whether their system can be safely connected to the National Grid.
3. **We'll visit your client's premises to conduct a survey** and identify viable and preferred sites for installation.
4. **We'll design a bespoke system** which can incorporate roof mounted systems, (to accommodate a variety of roof types and orientations), and ground mounted arrays.
5. **We'll instruct a structural engineer**, for all commercial projects, to carry out additional load-bearing calculations to ensure the safety of your client's design.
6. **We'll provide a full and detailed handover** to ensure your client knows how their new solar system works.
7. **We'll provide annual servicing packages** to ensure the ongoing peak performance of your client's system.

For planet & pocket.

Here to support you and your client in developing and maintaining a low carbon future.
