

Seeking a fresh start? It's time to build your brighter future with solar

David Stevenson, Mole Energy

If you're looking to make a difference, realise your potential and join a growing industry, then you owe it to yourself to consider a career in solar. And we're recruiting.

The story so far

The UK solar industry has bloomed since 2010, when the government launched its Feed-In Tariff. Since then, we've seen demand for solar panel and battery storage products increase steadily - until 2021, when demand surged.

Renewable products, services and jobs will only increase in the future. Climate challenges, oil and gas crises and the government's drive for Net Zero - including its ban on the sale of all new combustion cars after 2030¹ - means the solar industry is set to explode in importance in the coming years.

What about us?

At Mole Energy, we've already recruited twenty-five additional employees, since 2021, including: electricians, surveyors, installers, sales people, managers and administrators. This is over and above our initial core team who have remained with us.

And we could have employed many more too, had we not been so careful in selecting only those completely right for the role.

Here for the long term

We've been helping homes and businesses save money and reduce their carbon footprint, with cost-effective energy solutions, since 2010. But what makes us truly unique is that we're part of Mole Valley

Farmers, the UK's largest agricultural retailer, established in 1960. And this means added job security.

Important work

We're agricultural solar specialists - empowering farmers to become energy self-sufficient. We also support growers, distributors, farm shops, bakeries, quarries (agricultural lime) and other firms across the food chain - helping them to reduce energy bills and develop their low-carbon futures.

In doing so, **we're helping to secure UK food security as well as UK energy security** - both of which are set to become key challenges in coming years.

So, if you're looking for a career where you can make a difference as part of a friendly, hard-working team of experts, then we want to hear from you. There's never been a better time to join the UK solar industry. And what better place to build your career than with an awarding winning company - Mole Energy.

"I joined Mole Energy in 2017. I was initially employed as an installer electrician and then moved to our Service and Maintenance Department. I now head up the technical side of our Sales Aftercare Department. I've travelled throughout the South West and occasionally further afield. I enjoy visiting different places and meeting interesting people. I like using my mind to overcome technical challenges and know Mole Energy values my knowledge and expertise and trusts me to do my job."

Adrian - Electrician at Mole Energy
