AWARD
WINNING
SOLAR
INSTALLATIONS

Self-power your home and business.
Reduce energy bills and CO₂ emissions.

"Whilst I've been a Mole Valley Farmer customer since 1979, **choosing Mole Energy was very much a business decision.** I've seen many solar installers come and go over the years, but Mole Energy has stayed the course.

Our new panels are expected to contribute towards 50% of my energy bill. I've saved £230 already and, as the cost of energy goes up, my savings will increase too.

The installation went very smoothly. **Everything went to plan** - except for the weather!"

Alan Boddington, Proprietor - The Poltimore Inn

Mole Energy - Solar Specialists

Our specialist knowledge and expertise, built-up over many years, means we're able to offer cost-effective, bespoke solutions for any site, whatever the challenge.

Whilst the optimum location for solar is a south-facing roof, at a 30-degree angle; solar also works well on east-west roofs, with angles between 5 and 40 degrees.

Mole Energy will manage every detail of your solar project, to ensure a high-quality, bespoke installation that's optimised for years of operation.

Three easy steps to solar savings:

1. **Contact us** and speak to one of our specialist surveyors, who will discuss your unique requirements.
2. **If solar is viable for you**, we'll provide a bespoke quote and then if you're happy, we'll visit you to carry out a survey.
3. **If you decide to proceed**, our team will handle all your installation paperwork (including Building Control and District Network Operator requirements) and arrange a date for our specialist engineers to install your new system.

We will provide a full handover, (so you understand how your system works), and are here to support you in developing and maintaining your low carbon future.
