

Save on batteries, save on bills

David Stevenson, Mole Energy

When it comes to home batteries, the SolarEdge Home Battery is becoming a popular choice for many of our customers.

Why? It's a capable, cost-effective battery that's ready for action now, so you can start saving on home energy bills sooner.

Power

With 9.7kWh of storage, the SolarEdge Home Battery is the ideal choice for larger households with expensive appliances wanting to maximise the value of their solar panels by storing free energy to power their home after dark. For context, the average four-bed home uses around 12kWh of power every 24 hours.

When it comes to features, the Home Battery measures up well against other batteries. It can be installed inside or outside, controlled by your smartphone and 'stacked' for extra storage. The Home Battery charges quickly thanks to more advanced battery technology and is designed for use with SolarEdge panels.

Price

Price is where the differences really start to stack up.

Today, you'll pay zero VAT on home battery storage when purchased at the same time as solar panels. With the Home Battery installed from £8,177 that's a saving of £2,266 compared to purchasing separately.

Pronto

With no District Network Operator (DNO) approval required for the installation of an energy bank, many of our customers are choosing to purchase both at the same time.

And you can install up to three Home Batteries (29.1kWh of storage) at the same time as your panels - and still without DNO approval.

Save over £2,000 on home battery storage and derive maximum value from your solar PV from day one.

Features

- Maximised system performance, gaining more energy to store and use for grid tied systems
- Integrates with the complete SolarEdge offering, including SolarEdge solar panels
- DC coupled battery featuring superior overall system functionality
- Scalable solution for increased power and capacity
- Solar, storage, EV charging and smart devices all monitored and managed by a single app
- Wireless communication to the inverter
- Simple plug and play installation, with automatic SetAPP
- Multiple safety features for battery protection
