

Home solar isn't so complicated - and here's the proof

David Stevenson, Mole Energy

Big bill savings and energy independence mean that home solar PV and battery storage is a good idea. But deciding to install can still seem like a daunting prospect.

Understandably, some homeowners worry about upgrading their home energy systems, with renewable alternatives, as it might be too technical.

The truth is, installing solar is simple - and at Mole Energy, we do everything we can to make the process easy and hassle-free, so that you can enjoy the benefits of generating your own energy.

Just ask retired Devon couple Mr & Mrs C, proud owners of a Solar Edge home panel and battery system.

They were impressed by their neighbours' solar panels but were initially wary of having solar installed on their own property. They didn't feel they understood the technology and were concerned about any disruption that might be caused during the actual installation.

Thankfully, the couple's neighbours were able to answer many of their questions and recommended Mole Energy, who had installed their own system. When the couple called Mole Energy, our team was able to reassure the couple on all aspects of installation and operation.

"We first enquired about panels and battery storage in February 2022 and our Mole Energy consultant, Richard, answered all of our questions," said Mrs C. "Our survey revealed that we needed less panels than originally thought, due to the layout of our roof, which was great news."

They chose to install a 3.16kWh Solar Edge panel array with a 10kWh Solar Edge Home battery. Both systems work seamlessly with each other, making them ultra-simple to use.

This year the couple have used 751kWhs so far*, reducing their reliance on electricity from the National Grid by **81%**.

Expectations exceeded

"We decided to install solar and storage primarily for environmental reasons, but also to help us save money on energy bills," said Mrs C.

The results have exceeded their expectations at each turn. "Our panels produce more power than we'd hoped and they blend in well with the roof. This was one of our key concerns, but they almost look like the slate itself."

Unlock the power of your home and let our team support you through every aspect of the process.

What about the couple's concerns about installation?

"Mole Energy provided a very good service and we would definitely recommend them.

If we phoned, someone would always come back to us quickly. **The actual installation was quicker than we'd expected** and the Mole Energy team tidied up our garage after the installation, leaving it immaculate."

It all went much better than we could have imagined!"
