

# Powerwall does it all!

David Stevenson, Mole Energy

**As energy and fuel prices fluctuate, customers want to know if it's possible to reduce their reliance on the Grid and power their home independently - the answer is yes.**

And it's not only possible it's more cost-effective than ever before. Thanks to the Tesla Powerwall 2.0, your home can make the most of the energy your solar panels harness.

## Powerwall's persuasive credentials

With solar, it is not uncommon to generate more clean energy than you need. By combining solar panels with the Tesla Powerwall 2.0, a rechargeable home battery, you can store the excess energy from your solar panels for use anytime, any weather, and during a power outage. You can monitor what energy you produce, and control your self-powered system, with 24/7 access using the Tesla app.

## Checklist for cost-effective consumption

- **Lowering cost and complexity.** With easy installation and no maintenance, the Tesla Powerwall is a completely automated system designed for any home. Liquid thermal controls, independent fuses and touch-safe technology deliver maximum battery life and added safety. With an integrated inverter, the all-in-one construction provides one of the most affordable home battery systems in terms of cost per kWh.
- **A battery to power everything.** Powerwall can detect a power cut, disconnect from the Grid and automatically restore power to your home within a fraction of a second. With Powerwall's 3.68kW continuous power output, your home keeps running with little disruption.

- **24/7 mobile monitoring.** This means you can control your Powerwall and track your energy usage in real-time. Manage your features and track excess energy with instant notifications and easy navigation. Customise your system with performance modes and plan ahead for every season with backup protection during severe weather. Watch your energy flow in real-time and monitor your home's energy independence on a daily, weekly or monthly basis.
- **A thing of beauty.** Just wider than a double radiator, the Tesla Powerwall's sleek, subtle design looks good inside or outside any home and can be wall or floor mounted.
- **Peace of mind.** Tesla Powerwall 2.0 comes with a ten year manufacturer's warranty for unlimited cycles and 80% of the original energy capacity, when charged using solar energy. So, if your Powerwall falls below 80% of the original capacity whilst under warranty, you qualify for a replacement.
- **Great investment.** The Powerwall's 13.5kWh capacity really can meet the energy demands of your home and car. And it can be retrofitted to existing solar panels, so if bought with panels, you have the bonus of zero-rated VAT.

You really can power and have it all with the Tesla Powerwall.
