

Save thousands on home battery storage!

David Stevenson, Mole Energy

Spring is in the air, and so is some great news, especially if you've always wanted a Tesla Powerwall.

You could save £4,000 on the Powerwall 2*:

Since January 2023, Tesla has reduced the price by £2,275. And in February 2024, the government scrapped VAT on retrofitted home battery storage, saving an additional £1,790.

Feathering your solar nest

If you haven't already, it really is worth considering installing a battery. Adding battery storage to your solar array will reduce your reliance on the National Grid, so you can power your daily lives with sustainable clean energy.

Many of our customers have already added a battery to their system, enabling them to make the most of their renewable energy 24 hours a day, seven days a week.

If you installed solar before 2019 and are benefiting from Feed in Tariffs, you'll further increase bill savings without affecting your payments.

More energy, fewer panels

And there's more good news. Today's systems are so efficient you can generate more energy with fewer panels. You can add more panels to your current array or upgrade your existing system completely.

Either option will further increase your power generation without affecting your Feed in Tariff payments. And we will dispose of any old panels and recycle them for you.

It couldn't be a better time to install solar and battery storage**.

To find out more, call us on **01803 732946** or email us at **info@moleenergy.com**. Our team will be happy to advise further, discuss all options with you and arrange a free survey if required.
